ANNUAL DRINKING WATER QUALITY REPORT

Town of Nectar

January-December 2022

We're pleased to present to you this year's Annual Drinking Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every, day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. Our water comes from the well Pottsville Aquafer. We purchase some water from The Blount County Water System well number 1. The Blount County number 1 well produces water from the Warren Springs. The Blount County Water System has a Source Water Protection Plan available for review that provides more information such as potential sources of contamination. I'm pleased to report that our drinking water is safe and meets federal and state requirements. Please help us make this effort worthwhile by protecting our source water. Carefully follow instructions on pesticides and herbicides you use for your lawn, garden and by properly dispose of household chemicals, paints and waste oil. We are committed to ensuring the quality of your water. Chlorine is added to the water as disinfectant and the required residual is maintained to protect your drinking water from any possible outside contaminants.

The Town of Nectar routinely monitors for contaminants in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1st to December 31st, 2022. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily pose a health risk.

If you have questions about this report or concerning your water utility, please contact Greg Johnson, phone 205-559-7780. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled Board meetings. They are held on the third Tuesday of each month at 7:00 pm in the Town Hall. Town Council:

Rickey Box, Mayor Members: Cyndia Gilbreth, Derrick Coker, Jeannie Box, Katie Burns Town Clerk: Kristel Jones Assistant Town Clerk Whitney Narrell Water Operators: Greg Johnson, Stephen Abel

PLAIN LANGUAGE DEFINITION

- Not Required (NR) Laboratory analysis not required due to waiver granted by the Environmental Protection Agency for the Sinte of Alabama.
- Parts per million (ppm) or Milligrams per liter (mg/l) one part per million corresponds to one minute in two years or a single penny in \$10,000.
- Parts per billion (ppb) or Micrograms per liter one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.
- Parts per trillion (ppt) or Nanograms per liter (nanograms/l) one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.
- Parts per quadrillion (ppq) or Picograms per liter (picograms/l) one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in \$10,000,000,000,000.
- Picocuries per liter (pCi/L) picocuries per liter is a measure of the radioactivity in water.
- Millirems per year (mrem/yr) measure of radiation absorbed by the body.
- Nephelometric Turbidity Unit (NTU) nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.
- Variances & Exemptions (V&E) State or EPA permission not to meet an MCL or a treatment technique under certain conditions.
- Action Level -- (AL) the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
- Treatment Technique (TT) (mandatory language) A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.
- Maximum Contaminant Level (mandatory language) The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- Maximum Contaminant Level Goal (mandatory language) The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- Maximum Residual Disinfectant Level Goal or MRDLG The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- Maximum Residual Disinfectant Level or MRDL The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
 - Contaminants that may be present in source water include:
- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water run-off, industrial or domestic wastewater discharges, oil
 and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, storm water run-off, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also, come from gas stations, urban storm water run-off, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted.

The table below lists all the drinking water contaminants that we detected during the calendar year of this report. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or ADEM requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently.

Table of Detected Drinking Water Contaminants

05

					Sec. Sec.			
CONTAMINANT	MCLG	MCL	Range logical Contaminants - Jani			Amount Detected		Likely Source of Contamination
		- Bacterio	logical Cor	ıtaminan	ts Jan	uary - Dece	mber 2022	
Total Coliform Bacteria	0	< 5%	0	-	0	ND	Present or Absent	Naturally present in the environment
Turbidity	0		^他 把34.9%和34	NAME OF THE OWNER	State States	< 0.05	NTU	Soil punoff
		Kadioid	gical Cont	aminants	Janu		ber:2022	
Alpha emitters	0	15	ND	-	ND	ND	pCi/L	Erosion of natural deposits
						1.00		
Combined Radium 226 & 228	0	5	1.00		1.00	1.00	pCi/L	Erosion of natural deposits
		Inorga	anic Conta	minants		y - Decemb		
Barium	2	2	0.02	_	0.29	0.15	ppm	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Chlorine	MRDLG 4	MRDL 4	0.78	_	2.21	1.50	ppm	Water additive used to control microbes
Chromium	100	100	ND	_	ND	ND	ppb	Discharge from steel and pulp mills erosion of natural deposits
			No. of Si		ction level	mije na n a s		crosser of natural deposits
Copper	1.3	10 Sites AL=1.3		0		0.343	pom	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Fluoride	4	4	ND	_	ND	ND	ppm	Water additive which promotes strong teeth; erosion of natural deposits; discharge from fertilizer and aluminum factories
			No. of Si	tes above a	ction level	and the states	pp	
Lead	0	10 Sites AL=15		0		ND	ppb	Corrosion of household plumbing systems, erosion of natural deposits
Nitrate (as N)	10	10	ND	_	1.3	0.65	ppm	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Nitrite (as N)	I	1	ND	-	ND	ND	ppm	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
			ND		1.3	0.65		Runoff from fertilizer use: leaching from septic tanks, sewage; erosion of natural
Total Nitrate & Nitrite	10	10	-			5 17.20.20.022 1A	ppm	deposits
Haloacetic Acids (HAA5)	0	60	2.2		5.8	4.0	ppb	By-product of drinking water chlorination
Total Organic Carbon (TOC)	N/A	TT	ND	-	0.2	0.1	TT	Naturally present in the environment
Total trihalomethanes (TTHM)	0	80	5.7	-	8.80	7.25	ррb	By-product of drinking water chlorination

Chlorodibromomethane	N/A	N/A	2.5	-	2.5	2.5	ррЪ	Naturally occurring in the environment or as a result of industrial discharge or agricultural runoff; by-product of chlorination
Chloroform	N/A	N/A	1.8	-	1.8	1.8	ppb	Naturally occurring in the environment or as a result of industrial discharge or agricultural runoff; by-product of chlorination
Dibromochloromethane	N/A	N/A	0.87	-	0.87	0.87	ppm	Naturally occurring in the environment
Per/polyfluoraikyi subatances PFAS)	N/A	N/A	ND	-	ND	ND	ug/l	Man-made chemical that repels both water and oil.

Secondary Drinking Water Standards are guidelines regulating contaminants that may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. ADEM has Secondary Drinking Water Standards established in state regulations applicable to water systems required to monitor for the various components.

GENERAL INFORMATION

MCL's are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

As you can see by the tables, our system had no violations of allowable limits of contaminants in drinking water. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected. The EPA has determined that your water IS SAFE at these levels.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and radioactive material, and it can pick up substances resulting from the presence of animals or from human activities.

Some people may be more vulnerable to contaminants in drinking water than the general population. People who are immuno-compromised such as cancer patients undergoing chemotherapy, organ transplant recipients, HIV/AIDS positive or other immune system disorders, some elderly, and infants can be particularly at risk from infections. People at risk should seek advice about drinking water from their health care providers. EPA (Environmental Protection Agency)/CDC (Center of Disease Control) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline. All Drinking water, including bottled drinking water, may reasonably be expected to contain at least small amounts of some contaminants. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

Based on a study conducted by ADEM with the approval of the EPA a statewide waiver for the monitoring of asbestos and dioxin was issued. Thus monitoring for these contaminants was not required.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Town of Nectar is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tep for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Thank you for allowing us to continue providing your family with clean, quality water this year. We at the Town of Nectar work around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
